*Overall Objectives: The goal of this proposal was to field a survey experiment in Poland to better understand how individual views of foreign military deployments might be conditioned by different economic and security considerations, as well as by distance from a hypothetical military installation.

*Statement of Potential Overlap: The only potential overlap here is very broad with respect to substance and methodology. The goal here was to understand how Russia's aggression can give us insight into how people view foreign military basing in light of external aggression. Alternatively, our current proposal looks at how publics view foreign military basing in less developed countries and in environments where the U.S. is competing more directly with rival major powers (i.e. China) for basing access and influence.
